

To check the logs of the commits, `git log`

To check the 3 latest commits, `git log -3`

To check the logs as well as what changes been made (diff)  
`git log -p`

To have look at overall one line commits, `git log --oneline`

To check the logs as well as check what files have been changed,  
we use `git log --stat`

To check particular commit, we use commit Id or which  
is also called SHA Id, `git show SHA ID`.
