Git tag - Tag specific commit

`git tag -a beta.v1.0 SHA1D -m "my Beta Release"`

↓  
Add

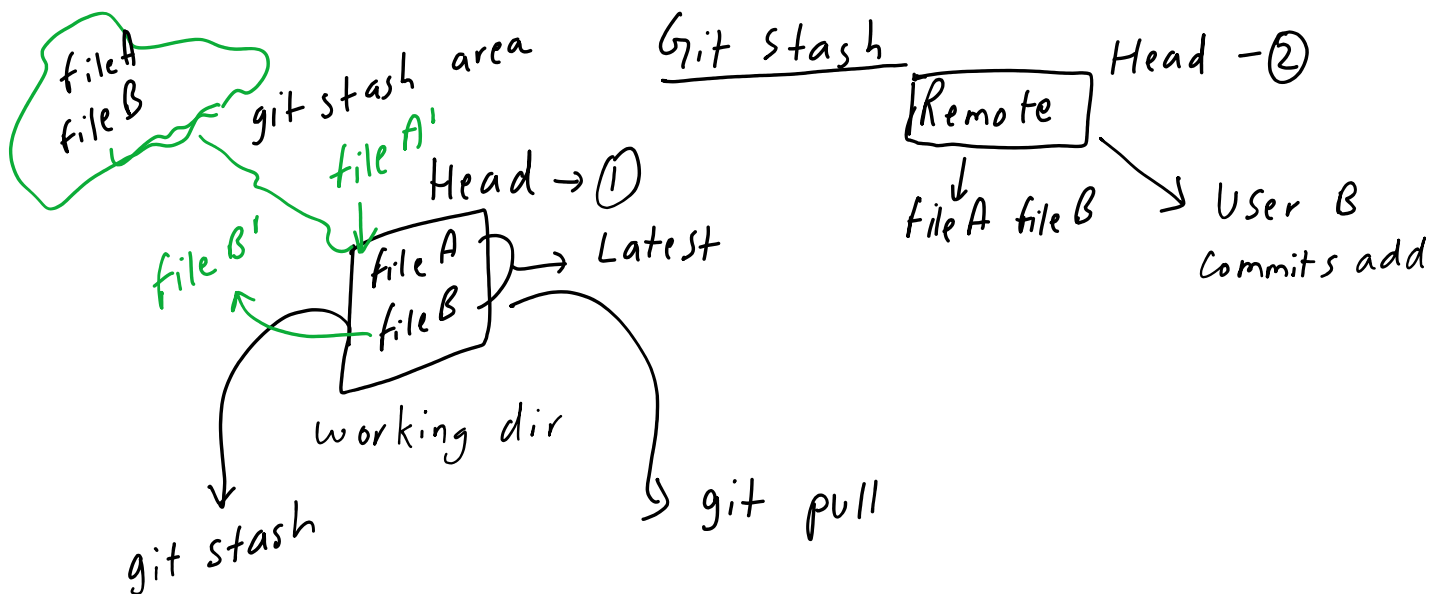

↓  
message

↓  
message.

Message.

To add and commit, `git commit -am "Merge Sort added"`

To remove tag, `git tag -d beta v1.0`

## Stashing -

Git provides an easy way of stashing these uncommitted changes so that we can return to them later, without having to make unnecessary commits.
